Feature

Built-in new generation temperature control program to ensure stable operation of the equipment.

With external circulating pump, can be established the second constant temperature field.

Fully enclosed compressor cooling system with over heating and over current protection.

Intelligent PID control, continuous work, easy operation.

With timing shutdown function, shutdown time can be arbitrarily set within 0 to 999 hours.

Refrigerated Circulator

RECL10-5 RECL30-50 RECL40-100

This product is mechanically cooled by a totally enclosed compressor. The inner wall of the cooling tank has cooling copper coils.

The refrigerant (Freon) continuously circulates through the coil on the inner wall of the water tank to cool the refrigerant in the tank. And then the refrigerant is conveyed to interlayer of the supporting equipment or the condensation coil through built-in circulation pump and external circulation pipeline. This method can cool the material in the reactor indirectly, and also cool & liquefy the steam in contact with condensation tube.

Complete Set

Generally speaking, this product can connect with the interlayer of a double-layer glass reactor, rotary evaporator, and condensation coil of the reactor for usage. It is also feasible to directly put objects or containers which need to be cooled into the bath for cooling or reaction.

The outlet pipe of this product is connected to the lower inlet pipe of the kettle or condenser. The circulating liquid comes out from the upper circulation port and returns to the inlet of this product through the pipe, forming a complete circulation.

Specifications

Low Temperature Cooling Liquid Circulating Pump

RECL20-4.5

Feature

- Small size-requires an installation space of 50*23*50cm(L*B*H).
- Can be installed directly on desktop, under lab bench, or in a fume hood, saving valuable space.

Environmentally friendly refrigerant producing no-toxic pollution.

Intuitive liquid level window for easy monitoring of liquid level in storage tank.

Water tank is set to protect the overflow port and drain port, which is convenient for filling-in and draining-out liquid.

Maintenance-free pressure/suction pump.

Pump pressure and flow can be automatically adjusted according to load change.

Adopt PID temperature control technology which greatly improves temperature stability.

Specifications

Model	RECL20-4.5
Temperature Range	-20°C to Ambient Temp.
Temperature Display	LED Display, Accuracy 0.1 °C
Temperature Stability	±0.3°C
Refrigerating Capacity	700W
Pump Pressure	0.3bar
Pump Suction	0.2bar
Pump Flow Max.	22L/Min
Tank Size	4.5L
Cooling Water Tubing	Silicone
Communication Interface	Optional RS485
Low-level Alarm	Optional
Heating Function	Optional
Dimensions (W*D*H)	220*420*495(mm)
Operating Environment	5-32 °C
Outer Connected Dimension	Standard 8mm insulation tube
Power supply	AC220/110V,50/60Hz
Package Dimension(W*D*H)	510*310*600mm
G.W.	33kg

Low Temperature Circulator

RECL30-5

Description

- It can be not only used to vacuumize, but also provide low-temperature cooling water, which is the favorable assistant equipment to reduce pressure distillation and concentration. This kind of product reduce using space, lower vacuum degree and save water source, which is assembled with rotary evaporator and widely used in modern laboratories.

Working Principle

This product is mechanically cooled by a totally enclosed compressor. The inner wall of the cooling tank has cooling copper coils. The refrigerant (Freon) continuously circulates through the coil on the inner wall of the water tank to cool the refrigerant in the tank. And then the refrigerant is conveyed to interlayer of the supporting equipment or the condensation coil through built-in circulation pump and external circulation pipeline. This method can cool the material in the reactor indirestly, and also cool & liquefie the steam in contact with conden-sation tube.

Generally speaking, this product can connect with the interlayer of a double-layer glass reactor, rotary evapora-tor, and condensation coil of the reactor for usage. It is also feasible to directly put objects or containers which need to be cooled into the bath for cooling or reaction.

The outlet pipe of this product is connected to the lower inlet pipe of the kettle or condenser. The circulating liquid comes out from the upper circulation port and returns to the inlet of this product through the pipe, forming a complete circulation.

Specification

Model		RECL30-5
Temperature Range		-30℃ ~RT.
Ambient Temperature		5 ~35℃
Ambient Humidity		≤70%
Electricity		Single phase AC220/110V,50/60Hz
Total Power		887W
Safety Protection		Delay, over-current, overheat
Display		LCD display, key operation
Temperature Control Accuracy		±0.1℃
Sensor		PT100
Refrigerant		R22
Condensation Coil		φ 8 copper tube plated by nickel
Equipment Material		Cold plate spray, anti-corrosion
Water Tank Dimension and Volume		φ 220*180mm, 6.8L
Available Dimension in Water Tank		φ 185mm
Cover Opening		φ 200mm
Outer Circulation Interface		Pagoda joint with Φ12mm outer diameter (facing the left side of the equipment)
Dimension		423*485*(760+ pole 400)mm
N.W./G.W.(kg)		46kg/60kg
Package Dimension (W*D*H) (mm)		610*450*900mm
	Quantity	1
	Power	735W
	Cooling Capacity	2324W
Circulation Pump	Power	100W
	Lift	4-6m
	Flow	20-40L/min
	Pressure	≤0.4MPa
Air Cooling Condenser	Power	52W
	Heating Exchange Area	4.2m2
	Air Volume	760m³/h

Low Temperature Circulator

RECL20-2X

User-Friendly Design

Featuring an ergonomic and compact footprint, it operates with ultra-low noise levels. Its space-saving design allows for versatile placement on laboratory benches or inside fume hoods.

Applications When Paired with Rotary Evaporators

It is widely used in various fields such as chemistry and pharmacy departments in universities nationwide, local Centers for Disease Control and Prevention (CDC), inspection and quarantine, food and drug rapid testing projects, and pharmaceutical R&D departments; it is primarily used for experiments involving concentration, extraction, drying, separation, and crystallization.

Description

This low temperature circulator features a fully enclosed refrigeration system integrated with PID control technology, ensuring rapid cooling performance and high temperature stability. It is widely utilized across various laboratory and industrial production sectors to meet diverse requirements for cooling and constant temperature control.

Specification

Model	RECL20-2X
Temperature Range	-20°C to RT.
Min.Temperature (No-load)	-20 °C
Temperature Resolution	0.01 °C
Temperature Control Accuracy	±0.5 °C
Tank Volume	2.5L
Bath Fluids	Ethanol, Ethylene glycol, Antifreeze
Max. Flow Rate	18L/min
Max. Head	7m
Pressure	0.6 bar
Display	5-inch touch screen digital display: temperature and time settings, refrigeration and circulation indicators.
Cooling Capacity	700W (20 °C), 420W (0 °C), 280W (-10 °C), 120W (-20 °C)
Compressor Power/Current	480W/3.1A
Circulation Interface	Pagoda joint with φ10mm outer diameter
Tank Material	SUS304 Stainless Steel
Refrigerant	R404A
Housing Material	Cold-rolled steel with electrostatic spray (SPCC)
Drain Valve	Yes
Timer Function	Yes
Level Indicator Window & Low Level Alarm	Yes
Electricity	220~240V, 50Hz
Total Power	580W
Ambient Temperature	5-35 °C
External Dimensions (W*D*H)	240*420*475mm
Package Dimensions (W*D*H)	310*475*655mm
N.W./G.W.	28kg/34kg
Optional Features	RS485 or RS232 communication interface; Parallel interface.
